Sales, Installation, Service, Expertise...

Let our experience, and our customer's experiences be your guide.

- 80 and 160 ton salt models pre-configured for fast deployment.
- Optimized block configurations for each size.

Installation

- We offer complete turnkey installation service, anywhere in Southern Ontario.
- Block supply, delivery, and placement.
- Delivery and installation of Dome.
- Fast turn around.

GTA pricing on hand for 80 ton and 160 ton models

- Dome - Supply only, with complete installation instructions.
- Dome - Supply and install, by our installation crew
- Dome and Blocks - Supply and install, by our installation crew.

Service

- Repairs, modifications, relocations, scheduled maintenance.
- Rush service available.

Existing Blocks?

- No problem.
- From our full line of shelter systems, we can make a Dome to suit your existing foundation.

Know how many tons or yards you need to store?

- No problem.
- We know what it will take to service your requirement.
- We have block configurations and a Dome to suit your needs.

Recover

- Recovers and repairs of any brand of shelter system.

Storing aggregates and salt exert particularly high demands on storage structures. In the face of high mounting height, exposure to UV and wind, and the corrosive nature of salt - Dome™ Salt Shelters are designed to **PROTECT & PERFORM** in the Canadian climate.

Galvalume™ Framework

Long term performance starts and stops with corrosion resistance - Galvalume™ PROTECTS. Galvalume™ is an inline continuous hot-dip process - galvanizing both inside and outside of all tubing. This unique lab tested coating exhibits corrosion resistance over 5 times that of conventional pre-galvanized steel. Unlike conventional hot-dip galvanizing - Galvalume™ is smooth to the touch with a lacquer top coat to prevent cover abrasion. All welded areas are protected by self healing cold galvanize. We are proud to warranty our Galvalume™ frames for 10 years against manufacturing defects.

Application Specific Anchors

Comprised of a rigid galvanized steel bracket and concrete wedge anchors, this system is designed to mount atop concrete block, in extreme conditions.

High Performance 12oz. RU88X Covers.

The standard fabric on all Dome Shelter Systems is designed for rough handling applications. While remaining flexible in the cold, its heavy weight and double weave polyolefin design give it unmatched puncture, tear and "rip-stop" strength. Manufactured to resist UV degradation and remain water tight.

Available in 4 popular colours:
(White, Green, Sand, Blue).

Ratchet Tensioning

Unrivalled cover strength and UV protection combined with our proven ratcheting cover system eliminates flapping, helps shed snow and translates to low maintenance and long cover life that we are proud to warrant for 5 years.

Combining the protection of our 10 year frame warranty and 5 year cover warranty with testimonials from our customers boasting shelter lives of 10 + years - You can rest assured your Dome™ is built to last.
*Each of our shelters is manufactured in our Toronto plant.

High Clear Height

High clear heights mean ease of access for dumping and loader operation.

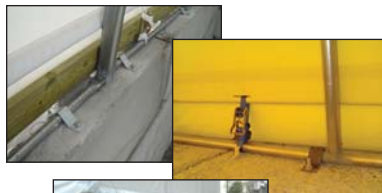

Cross Cabling

Aircraft cable cross-bracing. Typically mounted at height, with increased exposure to wind, this feature boosts rigidity and stops sway.

Specialized Cement Anchors

Versatile anchor assemblies allow for easy installation and relocation if necessary.

Rebar Block Retainers

Protects against cement block shift if pushed by a loader.

Reinforced Mesh Vent

Rear fabric walls come complete with steel reinforcing framework and porous vinyl mesh vent to avoid sail effect - particularly important when one end of the shelter remains open.

The Dome™ Cost Advantage

Failing to contain road salt...can cost you.

- Loss of dissolved material
- Moisture clumping or hardening of material
- Jam or damage equipment and spreaders
- Simple flat tarping is cumbersome and restricts access to salt if snowed on
- Municipal Bylaw fines for salt run off

Protect it and SAVE, in more ways than one.

Keep salt protected and centralized.

Cut down on transport cost to and from sites.

Large client site? Keep salt on site

Dome™ Salt Shelters - Professional Touch.

A Dome, not only protects salt and equipment from the elements. Landscapers, snow removal and property management professionals prefer Dome Shelter Systems for their clean, professional appearance - demanded by their clients.

Our Shelters Are Not Just For Salt Storage...

- Gravel, crushed stone, screening, peat, top soil, hay, sand, mixed aggregates
- Inventory storage
- Equipment storage
- Vehicle storage
